

Perfect for distributing music throughout your home, or for a discreet home theatre experience, the Ecliptix are can be used as main fronts or side and rear surrounds.

A rectangular in wall version of the Krix Hemispherix in ceiling speaker, the Ecliptix offers precise tonal matching when installed together with the Hemispherix. Designed for a 90mm wall cavity, its fully enclosed back box ensures acoustic integrity and prevents rear sound radiation from being transferred to adjoining rooms.

Bass and midrange clarity are delivered through the 100mm bass driver, with a large magnet and aluminium shorting ring, while the 25mm dome tweeter directs high frequencies toward the listener. The slim bezel paintable grille is held in place by magnets for easy installation.

For the ultimate sound experience at home, play it through Krix.

## FEATURES

- Slimline magnetic grille
- Fits inside 90mm wall cavity
- Fully enclosed backbox

Stratospherix AS	
Frequency Range	65Hz - 20kHz (in room response)
